

WHAT IS CLAIMED IS:

1. A car sale information providing system comprising:
a car information storage unit stored with mappings of
car information containing a name, a type, a year model etc of
5 a car to car inspection information obtained as a result of
inspecting the car concerned;

a car information input device inputting the car
information and getting the car information stored in said car
information storage unit;

10 a search unit outputting an input screen to input
conditions when searching the car information stored in said
car information storage unit, and searching based on conditions
inputted; and

15 a car information output unit outputting display
information, including a purchase indication interface
transmitting car purchase information containing the searched
car information and the car inspection information corresponding
to the car information.

20 2. A car sale information providing system according to
claim 1, further comprising an inspection indication output unit
for outputting inspection indicative information for prompting
an inspection of an uninspected car, corresponding to the input
of said car information input device,

25 wherein said car information input device gets the car
information of the uninspected car stored in said car information
storage unit in a state where the same car information is not

searchable by said search unit, and

said car information storage unit changes the car information to a searchable state in accordance with an input of the car inspection information created from the inspection
5 based on the inspection indicative information.

3. A car sale information providing method comprising:
inputting car information containing a name, a type, a year model etc of a car;

10 inputting car inspection information obtained as a result of inspecting the car concerned;

storing mappings of the car information to the car inspection information;

15 outputting an input screen for searching the car information and searching based on conditions inputted;

displaying the searched car information and the car inspection information corresponding to the same car information; and

transmitting car purchase information.

20 4. A car sale information providing method according to claim 3, further comprising:

outputting inspection indicative information for prompting an inspection of an uninspected car, corresponding
25 to the input of the car information;

storing the car information of an uninspected car in a state where the same car information is not searchable in said

searching; and

changing the car information to a searchable state in accordance with an input of the car inspection information created from the inspection based on the inspection indicative
5 information.

5. A car sale information providing method comprising:
displaying car information containing at least a name, a type, a year model etc of a car and inspection information
10 of the car on a display screen on a terminal device connected to a host device; and
inputting purchase information for purchasing a car.

6. A car dealing system comprising:
15 a car information storage unit storing car information containing a name, a type, a year model etc of a car;
an exhibit information storage unit storing mappings of plural categories of exhibit information containing at least animated image data or sound data to the car information;
20 a search unit searching the car information;
a header display unit displaying a header of each items of car information as a result of the search in a selectable manner; and
a display unit outputting car screen information when the
25 header is selected, including an output indication interface giving an indication of outputting the car information with its header selected and an indication of outputting exhibit

information corresponding to the car information outputted.

7. A car dealing system according to claim 6, wherein said car information storage unit is stored with mappings of the car information to car inspection information as a result of inspecting the car concerned, and

said display unit further displays the car inspection information corresponding to the car information.

8. A car dealing system according to claim 6, wherein said display unit further includes a purchase indication interface for transmitting a piece of information for purchasing the car concerned.

9. A car sale information providing method comprising: searching car information containing at least a name, a type, a year model of a car;

displaying a header of each item of car information as a result of the search in a selectable manner;

outputting, when the header is selected, the car information with its header selected;

searching plural categories of exhibit information containing at least animated image data or sound data, which are stored corresponding to the car information; and

outputting the exhibit information.
